

What is Shea Butter

Shea butter is an ivory-coloured fatty substance made from the nuts of karite nut trees that grow in the Savannah regions of West and Central Africa. Shea Butter is fondly referred to as "WOMEN'S GOLD" in Africa, as it provides many women with employment in its production.

Why is Shea Butter in demand

The reason is that Western countries are only recently beginning to recognize the considerable health and cosmetic benefits of Shea Butter, a truth which African countries have known for thousands of years.
